

NAC - Managed Service

Partner Benefits

- Fast Track to Managed Services
- Immediate revenue stream without up-front investments
- No need to hire and train NAC engineers
- Comprehensive reports for partners & customers
- Strengthens customer relationships
- Maintain brand presence with a white label portal
- On-demand service

NAC Overview

The NAC Appliance is designed to be the first point of contact for users entering a corporate network. It enables administrators to authenticate and authorize users, as well as enforce organizational security policies before network access is granted.

The system enables the enforcement of a number of different policies, depending on device type, user, and role. Machines that are out of compliance can be directed to remediation servers for the delivery of patches and other updates.

CASPER Overview

CASPER integrates with NAC, providing a mechanism for security data collection, normalization, and the categorization of collected data. It analyses the collected data, providing visibility to customers on the various performance metrics of critical events, to manage security across the enterprise, and meet various regulatory / compliance needs.

End Customer Benefits

- Protects the network from unauthorized access
- Enforce group policies to control users network access
- Policy based reports
- Enhances security posture
- Policy-based compliance reports
- User-friendly GUI portal
- 24x7x365 monitoring
- Certified Security Analyst support
- Efficient incident handling
- Cost-effective delivery model
